SEASON 3

DICE CHALLENGE

GROWING BEAUTY
& PERSONAL CARE
THROUGH
INFLUENCERS

**BUSINESS
TRACK**

The Landscape

India's beauty and personal care (BPC) market has grown rapidly, powered by rising disposable incomes, growing aspiration in smaller towns, and the mainstreaming of grooming and self-care. Across skincare, makeup, haircare, fragrances, bath & body, and men's grooming, discovery and purchase are shifting online — and digital-first, value-focused brands are winning share alongside established players.

Yet BPC remains a high-consideration, trust-sensitive category. Shade matching, skin and hair suitability, ingredient awareness, and the fear of counterfeits make first purchases difficult, especially for first-time online buyers in Tier-2 and Tier-3 markets. Converting fragmented interest into confident purchase is the core challenge for brands and platforms alike.

For Meesho, BPC is a high-frequency, high-repeat category where authentic, relatable recommendations can unlock trust. Regional, vernacular, and micro-creators are uniquely placed to demonstrate products, answer suitability questions, and drive confident discovery for value-conscious users.

Influencer-Led Commerce at Meesho

Meesho works with a growing community of creators who help sellers reach new audiences. Creators order products from Meesho, produce content — tutorials, get-ready-with-me (GRWM) videos, Meesho hauls, reviews, and routines — and share it with a purchase link (Instagram autoDMs, captions, storefronts). Users who click are redirected to Meesho to complete their orders.

Creators fall into two groups by activity and the consistency of the engagement and sales they generate:

- Activated Creators - Who have begun posting Meesho-linked content but are yet to build consistent traction.
- Power Creators - Who generate consistent NMV and drive a larger share of engagement and commerce.

Beauty and Personal Care

BPC contributes a meaningful share of Meesho's overall NMV, but a smaller share of affiliate (influencer-driven) NMV. The category is under-indexed in the influencer channel relative to its demand and closing that gap is significant headroom to grow BPC through creators.

Factor to keep in mind. In BPC, competitors run a higher affiliate share than Meesho. Identify the levers across creators, users, and brands - that can help close that gap.

Objective

Influencer-led BPC is a three-sided marketplace. It works only when brands, creators, and end users each get what they need. Design a model that aligns all three to:

- Grow Beauty & Personal Care Net Merchandise Value (NMV)
- Increase creator retention across Beauty & Personal Care
- Make influencer-led BPC commerce scalable on Meesho

Start by understanding each side - what brands want, what creators want, and what end users want. Then prioritize the value-chain levers that serve all the three.

Expected Benefits

- **For brands** — stronger category trust and fewer concerns on their listings.
- **For creators** — higher BPC NMV per influencer and better retention; stronger monetization in a high-repeat category keeps creators active and attracts new ones.
- **For end users** — authentic demonstration eases shade, skin-type, and quality doubts, lifting first-purchase conversion and repeat buying, especially for Tier-2/3 first-time buyers.
- **For the platform** — sustainable scale in influencer-driven BPC orders, supplementing traditional channels.

Required Output

Your model should answer:

- What do brands, creators, and end users each want - and where do those needs align or trade off?
- Which levers across the value chain best serve those needs and grow BPC NMV?
- How should activation, sampling, and incentives be designed for beauty creators?
- How should trust and suitability concerns (shade, skin type, counterfeits) be resolved for users?
- What tech and attribution support is required?
- What uplift in BPC NMV and creator retention is expected, and over what timeline?

Package your answer as:

Round 1: - 3 Slide Submission

- **Value Chain Map** — the influencer value chain (map the journey of a BPC sale when a creator drives it, end to end by talking with Meesho Creators)
- **Prioritization Framework** — how you rank the levers you identify.
- **Quick-Win Lever** — the one lever you would prioritize in your first 30 days, with a short rationale.

Round 2: - 6 to 10 Slide Detailed Deck

- **Value Chain Analysis** — a stage-by-stage breakdown of the beauty funnel, with pain points and opportunities at each stage.
- **Prioritized Levers with Sizing** — your shortlisted levers, each with data-backed sizing of the NMV uplift it can unlock.
- **Deep Dive on a Key Lever** — one lever examined in depth: why it matters, how to execute it, and its expected impact.
- **Implementation Roadmap** — a 30-60-90 day plan to pilot and scale that lever.
- **Supporting Research** — evidence from creator interviews, user surveys, or expert conversations.

Evaluation Criteria

Round 1

1. Extent of research (methods, sources, coverage)
2. Quality of insights
3. User-first approach
4. Problem-first mindset.

Round 2

1. Quality of research
2. Depth of analysis
3. Innovativeness of recommendations
4. 10x and long-term thinking
5. Feasibility of implementation
6. Presentation skills.

How to Score Better

- Speak with 7-10 Meesho beauty and non-beauty creators; float surveys to strengthen primary research on users.
- Talk to employees, teams, brands and experts in the field for greater depth.
- Back your lever prioritization with data (Secondary research) and sizing.

Good luck! We look forward to seeing how you tackle this challenge and come up with innovative ideas for Meesho's growth and success.
